

# ***Naval Special Warfare Group THREE***

---

## **Proposed NSW Training Within the Pacific North West**

**Ms. Margherita Parrent  
Deputy Facilities Director**

# ***NSWG-3 Mission***

Naval Special Warfare Group THREE, as the undersea proponent for Naval Special Warfare Command and the US Special Operations Command, mans, trains, equips, deploys, sustains, and provides command and control for Naval Special Warfare forces by conducting full spectrum undersea maritime special operations and activities worldwide in support of Combatant Commanders and interagency partners.

**As SOCOM's only clandestine undersea capability, we have very unique training requirements**

# ***FY16 TRAINING REQUEST***

---

- **Currently for FY16 NSWG3 is:**

- Requesting environmental and real estate support for 6 new areas in addition to the 21 received for FY16, along with the 1 in the EIS brings the total of training areas requested to 28.

- **Two training cycles :**

- The first from mid-January through mid-February 2016
- The second from mid-February through mid-April 2016

- **Personnel:**

- Students 20
- Support Staff 50

# ***Training Information***

---

- **Training Locations to be used for:**

- Training cycle consists of a cycle of darkness or 24 hours in duration
- All Training that will be conducted is non-invasive in nature (no live fire, no digging, or cutting vegetation, etc.). A goal for personnel conducting this training is not to be detected by others in the area. Upon exit from these areas there is no tell-tail sign of their presence.

- **All Water Based Training**

- Supervisor and safety support for small submersible craft operations: 10 personnel on 2-3 Rigid Hull Inflatable Boats (RHIBs) assigned to supervise the dive, providing medical support if required. Additionally, they maintain a safe buffer (500-1000 meters, as per the situation dictates) between the small submersible craft and other civilian craft. Other responsibilities for this group are looking out for hazards to navigation that could affect the safety of the personnel conducting the dive and re-calling the small submersible craft to the surface if required.

# ***Training Information***

---

- **All Land Based Training**

- Supervisor and safety personnel on land will be up to 10 personnel responsible for the safety and oversight of personnel conducting training. This group evaluates and maintains a buffer preventing bystanders from entering into the specific area. Two or three vehicles will be utilized by these 10 personnel; one vehicle is designated as an Emergency Response Vehicle. The vehicles will be parked in designated areas that afford optimal availability if required during the training event.

# ***Proposed Types of NSW Training***

---

- **Combat Swimmer (CS):** Using small inflatable boats, divers would be inserted into waterways. They would conduct an infiltration to an objective (e.g. harbor, beach, moored vessel) and conduct a variety of tasks for up to six hours. Most combat swimmer training would be confined to the waterways, however, there could be cases where personnel would conduct OTB training in conjunction with training CS.
- **Direct Action (DA):** This training would consist of up to 20 personnel conducting “simulated” actions against a threat or enemy within the confines of a specified area or building. It would include the use of “simulated weapons”, no live-fire weapons would be used. The simulated weapons would be marking rounds, which are plastic/paint capsules that wash away with water. No property damage would occur and cleanup would be handled by the instructors and support staff.

# ***Proposed Types of NSW Training***

---

- **Insertion and Extraction (IE):** Personnel would be trained to approach or depart an objective area using small submersible craft or small boats and various tactics. This activity would train personnel to insert and extract people and equipment during the day or night. Tactics would include personnel swimming in and out of a small submersible craft or small inflatable boat to a target objective.
- **Launch and Recovery (LR):** This type of training would be conducted in water areas and consists of launching and recovering up to two small submersible crafts from a boat ramp or water platform. The small submersible crafts are battery powered and very quiet. It would deliver four - six personnel to the training area within 20-800 yards from shoreline. As part of this training, the personnel would exit the craft and swim to the shoreline. Upon completion of the training, the submersible craft would return to the area, recover the personnel and return to the launch site.

# ***Proposed Types of NSW Training***

---

- **Over the beach (OTB):** The training would be conducted in conjunction with small submersible craft training or from a small watercraft. Personnel would exit the craft and swim to shore, cross the beach, and quietly move into the vegetation above the high water line. Upon arrival at a pre-designated area, personnel would remain hidden for a number of hours before exiting site. There would be no tell-tale signs left of their presence

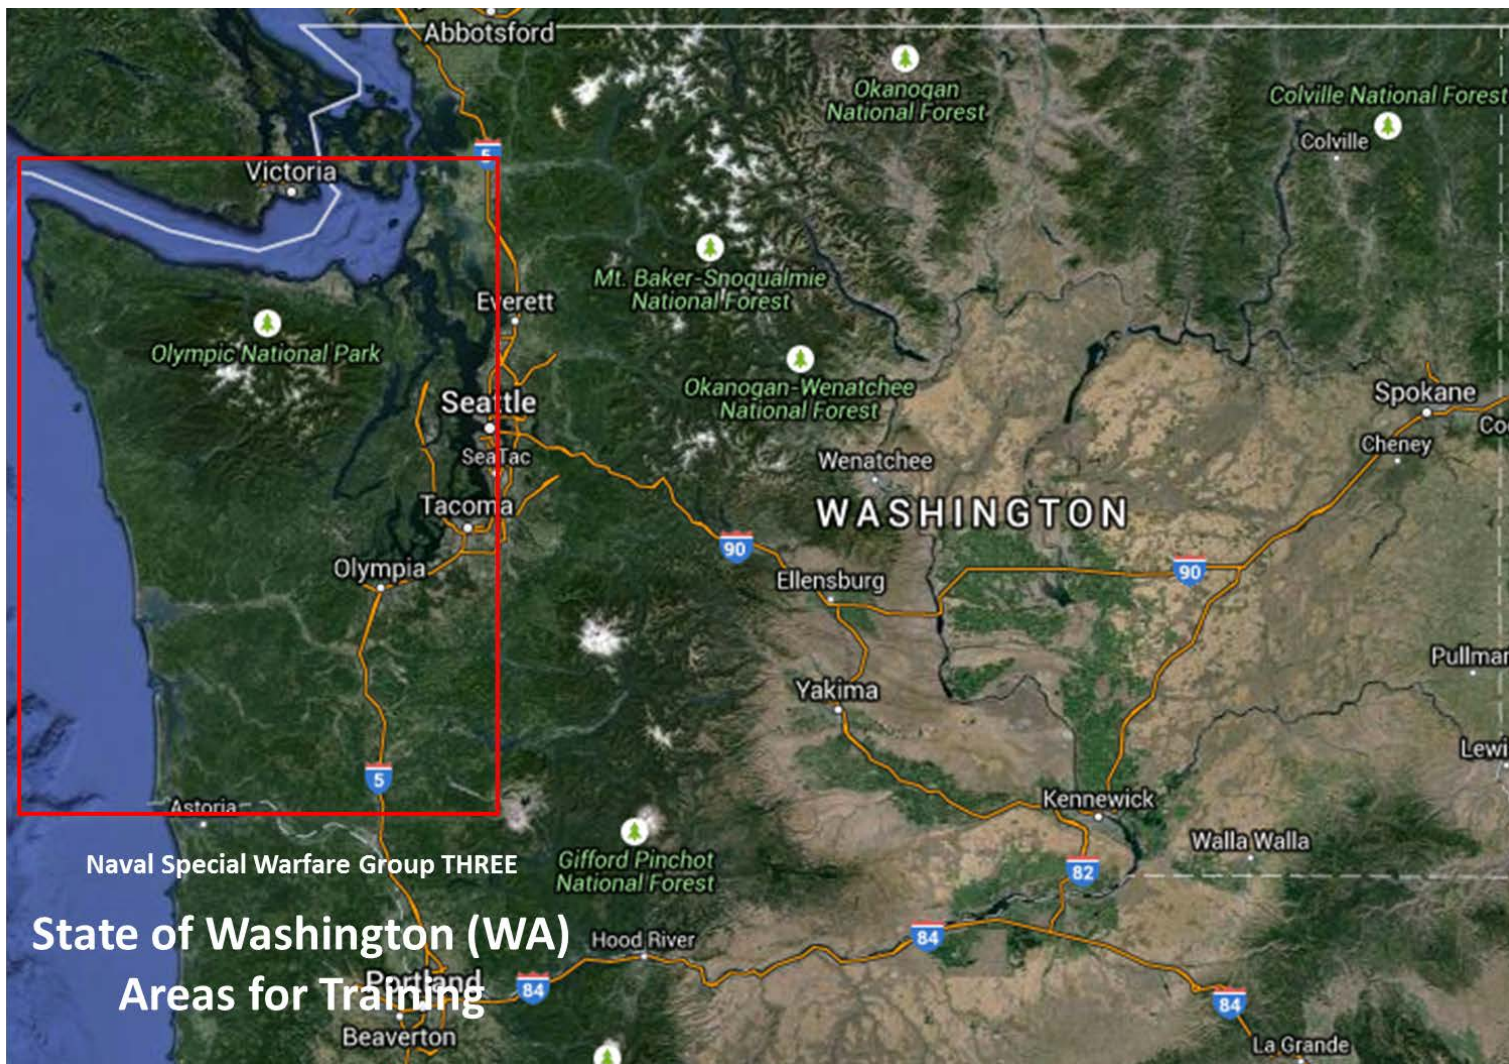

# ***Proposed Types of NSW Training***

---

- **Special Reconnaissance (SR):** This training could be land based only or water and land based. Utilizing up to two small submersibles, personnel would be delivered to training area between 20-800 yards from the shoreline. Personnel would exit the craft and conduct OTB training operations, then patrol to an objective, a predetermined location for a number of hours. Upon completion of the training on land, the small submersible craft would return to the area, the personnel would swim to the craft and then depart area. If land based only, personnel would be dropped off via a vehicle and patrol to an objective activity similar to what is stated above.
